CIMIC Foundry AI Workshop

Workshop Details

Field	Value
Customer	CIMIC Group
Outcome	Building Intelligent AI Agents for Infrastructure Operations
Platform	Microsoft Foundry Agent Service + Azure Databricks
Modules	5 (Foundry overview and Setup → Agent Build → Databricks → Toolkit → E2E Demo final agent)

This proposal covers **two delivery options**. Choose the format that best suits the audience and available time.

Option A: Led Demo (Audience Watches)

The workshop lead runs through the entire build while the audience observes on a shared screen. Audience participates via discussion, Q&A, and suggesting prompts during the demo.

Schedule

Time	Duration	Activity	Module	Notes
09:00	10 min	**Welcome & Introductions**	—	Introductions, agenda, CIMIC scenario context
09:10	40 min	**Foundry Overview & Setup**	Module 1	Foundry overview (what it is, agent concepts, governance, workshop architecture), create project, deploy model, explain V2 hierarchy.
09:50	40 min	**Build the Agent**	Module 2	Demo: create agent, craft system prompt, add File Search + Code Interpreter, test in playground. Invite audience to suggest test prompts.
10:30	15 min	☕ **Break**	—	
10:45	60 min	**Databricks Integration**	Module 3	2 Integration options. Demo with option 1: with pre-loaded simulated data tables, create Genie Space, connect MCP, Identity passthrough (RLS), test. Explain OAuth passthrough. Show Fabric mirroring briefly.
11:45	25 min	**Toolkit Deep Dive**	Module 4	Demo: connect Bing Grounding, test market price query. Walk through AI Search and Custom Functions concepts — use diagrams and discussion.
12:10	10 min	☕ **Break**	—	
12:20	30 min	**E2E Demo + Evaluation**	Module 5	Demo: configure full agent, run test scenarios live, show Foundry evaluation with results. Invite audience to suggest ad-hoc prompts.
12:50	15 min	**Discussion & Q&A**	—	Next steps discussion, feedback
13:05		**End**		

Total: ~4.05 hours (3 hours content + 0.5 hours breaks + 0.5 hours intro/wrap-up)

Option B: Hands-On Workshop (Audience Builds Along)

Participants follow each module step-by-step on their own Azure subscriptions or shared resource as a group work. The workshop lead demos first, then participants replicate.

Schedule

Time	Duration	Activity	Module	Notes
09:00	10 min	**Welcome & Introductions**	—	Introductions, agenda, verify prerequisites
09:10	80 min	**Foundry Overview & Setup**	Module 1	Foundry overview (what it is, agent concepts, governance, workshop architecture), provision resource + project, deploy GPT-4o, verify RBAC
10:15	15 min	☕ **Break**	—	
10:30	90 min	**Build Your First Agent**	Module 2	Create agent, system prompt, File Search (2 docs), Code Interpreter, test in playground
12:00	45 min	🍽️ **Lunch**	—	
12:45	90 min	**Databricks Integration**	Module 3	2 Integration options. Handon with option 1: Load 4 tables, create Genie Space, connect MCP to Foundry, Identity passthrough (RLS), test. Fabric mirroring shown as demo (not hands-on).
14:15	15 min	☕ **Break**	—	
14:30	60 min	**Toolkit Deep Dive**	Module 4	Bing Grounding (hands-on), Azure AI Search + Custom Functions (concept walkthrough only)
15:30	15 min	☕ **Break**	—	
15:45	45 min	**E2E Demo + Evaluation**	Module 5	Update system prompt, run test scenarios, run Foundry batch evaluation, review results
16:30	15 min	**Wrap-Up & Q&A**	—	Next steps, cleanup instructions, feedback
16:45		**End**		

Total: ~7.75 hours (5.60 hours content + 1.5 hours breaks + 0.5 hours intro/wrap-up)

Pre-Workshop Checklist

- ☐ Confirm all participants have Azure subscriptions with **Azure AI Owner** or **Contributor** role
- ☐ Confirm Azure Databricks workspace is provisioned in each participant's subscription (or shared workspace with per-user access)
- ☐ Pre-create resource group `rg-cimic-ai-workshop` in **Australia East** for each participant (optional — saves 5 min in Module 1)

- ☐ Verify **Managed MCP Servers** preview is enabled on the Databricks workspace
- ☐ Prepare **Grounding with Bing Search** resource (one shared resource is fine — participants connect to it - optional if we don't want to follow this part)

Option Comparison

Dimension	Option B (Hands-On)	Option A (Led Demo)
Duration	~7.75 hours (full day)	~4 hours (half day)
Audience size	5–15 participants	Any size
Azure subscriptions needed	1 per group	2 (presenter's)
Databricks workspaces needed	1 per participant (or shared with per-user access)	2 (presenter's)
Audience engagement	High	Medium — watching + discussion + suggesting prompts
Risk of blockers	Higher — resource availability, permissions, quotas, network issues	Low — everything prepared on workshop lead env
Best for	Technical teams who will build agents themselves	Executives, architects, mixed-technical audiences

---

Workshop Leads

Role	Name	Responsibility
Workshop Lead	Katherine Tran	Delivers the workshop, runs demos, Foundry AI focus
Workshop Lead	Sajit Gurubacharya	Delivers the workshop, runs demos, Databricks focus
CIMIC Sponsor	Christina Cappelen-Smith	Business context, Team member selection, CIMIC-specific Q&A
